Railway vehicles - Logistic solutions

Bachelor Degree in Industrial Engineering curriculum Mechanic

University of Trieste, Italy - 2020-2023

Thesis title: "Electric mobility and new models of cities"

High school diploma

ITTS Vito Volterra - 2015-2020

Majoring in robotics, electronics and electrical engineering

WORK EXPERIENCES

Internship: Associate Consultant

04/2026 - in progress

PwC Italy - Milan

Applied data-driven analysis to improve operational performance, developed models for flow optimization and resource allocation and supported decision-making through performance evaluation and cost-benefit analysis.

Internship: Mobility and Transport Engineer

10/2025 - 04/2026

NET ENGINEERING - Milan, Italy

Territorial and urban analysis to support the design of a new public transport service. Development of simulation and exercise models to assess the impact on the urban context. Use of GIS data, big mobility data, and modeling tools to analyze supply and demand.

Electrician:

06/2020 - 09/2020

ELETTRO3 SYSTEM

My duties involved the wiring of switchboards, installation, repair and testing of equipment for the generation and use of electricity; construction of civil installations with laying of cables and photovoltaic panels.

Internship - Supporting the software security manager:

05/2019 - 06/2019

CEDACRI INTERNATIONAL - Chisinau, Moldova

Thanks to a scholarship, I had the opportunity for a work internship abroad with the task of assisting the office manager in carrying out his daily work, which is the simulation of security software programming lines for banks.

Internship - Supporting the design engineer:

05/2018 - 06/2018

ENTECO SRL

I have done some small technical drawing work on the computer, programmed in VBA for structural calculation and data export from Autocad to Excel.
